Managed by : BABA KASHMIRA SINGH JAN SEWA TRUST (REGD.)

NAME : BABY RIYA	DATE:- 15/12/2021
REFD BY :- DR. NITEN GARG	AGE :- 12 DAYS
MRI SCAN: WHOLE SPINE WITH SCREENING OF BRAIN	SEX:- FEMALE CHILD

T1W, T2FS, T2W IMAGES IN AXIAL PLANE AND T2W & T1W IMAGES IN SAGITTAL PLANE ON A 1.5 TESLA MRI SCANNER

REPORT:-

Spinal curvature is normal. Vertebral bodies are normal in height, and signal intensity.

There is defect in the posterior elements observed in the lower lumbar region with e/o defect in the posterior spinal canal through which the spinal canal contents herniate with intact overlying skin and subcutaneous tissue. There is expansion of subarachnoid space anterior to the cord pushing the neural placode - lipoma interface posteriorly to lie outside the boundaries of spinal canal. The fat seen near the dorsal aspect of the neural placode is seen continuing with the adjacent subcutaneous fat and is seen protruding into the spinal canal on right side. Spinal cord is low lying and appears tethered. There is also splitting of the cord seen just above the level of spinal defect.

There is no pre/para vertebral or any epidural collection.

Cervicomedullary junction is normal.

SCREENING BRAIN: T2W IMAGES IN AXIAL PLANE.

Bilateral cerebral hemispheres are unremarkable.

Ventricular system is normal. no dilatation is seen.

posterior fossa structures including brainstem is unremarkable.

IMPRESSION :- MRI FINDINGS REVEAL

- **CLOSED SPINAL DYSRAPHISM – LIKLEY HEMILIPOMYELOMENINGOCELE.**
- **LOW LYING TETHERED CORD WITH SPLITTING OF CORD SEEN JUST ABOVE THE SPINAL DEFECT.**

Please correlate clinically and adv: clinical/ surgical correlation.
