MOLECULAR GENETIC ANALYSIS OF CONGENITAL CENTRAL HYPOVENTILATION SYNDROME (CCHS-HADDAD)

Indication: ?HADDAD syndrome

Test Requested: *PHOX2B* repeats

Test	The <i>PHOX2B</i> gene was sequenced to investigate for the presence of common polyalanine repeat expansion mutation PARM (heterozygous in-frame duplication within the 20 alanine stretch of the <i>PHOX2B</i> Protein) which could be the mutation causing Congenital central hypoventilation syndrome in the affected child.
-------------	---

RESULT	<p>JAIVARDHAN : Genotype – 20 / 27 GCN repeats</p> <p>[Range – Normal: 20 GCN repeats; Uncertain significance: 21-23 GCN repeats; Full penetrance: 24-33 GCN repeats]</p> <p>Heterozygous inframe duplication observed in the 20 alanine stretch of <i>PHOX2B</i> gene in the patient is positive for the common polyalanine repeat expansion mutation (PARM), -27 ± 2 alanine repeats</p>
Interpretation	<u>These results indicate the diagnosis of Congenital central hypoventilation syndrome in the proband.</u>

For specimens received from non NCGM locations, it is presumed that it belongs to the patient as identified on the labels of the container/Test Requisition Form and it has been verified as per GCLP (Good Clinical Lab Practices) by the referrer at the time of collection of the specimen. NCGM's responsibility is limited to the analytical part of the assay performed.

Recommendation:

- Genetic counseling is advised to explain and discuss the results

Please note : Although all precautions are taken during Molecular Genetic testing the currently available data indicate that the technical error rate for all types of Molecular DNA analysis is approximately 2%.

It is important that all clinicians or persons requesting Molecular Genetic diagnostics tests are aware of these data before acting upon these results.

The results assume that all patient information provided is correct.

This test and its analysis were performed in concordance with partner labs.

This report is for research purposes only, not for use in clinical diagnostic or therapeutic applications. This test has not been validated by the FDA, NABL or CAP, and it has been determined by the accrediting bodies that such validation is not required at this time.

For test performed on specimens received or collected from non-NSRL locations, it is presumed that the specimen belongs to the patient named or identified as labeled on the container/test request and such verification has been carried out at the point of generation of the said specimen by the sender.

----- End Of Report -----

For specimens received from non NCGM locations, it is presumed that it belongs to the patient as identified on the labels of the container/Test Requisition Form and it has been verified as per GCLP (Good Clinical Lab Practices) by the referrer at the time of collection of the specimen. NCGM's responsibility is limited to the analytical part of the assay performed.

My name is Sachin Sharma and my baby has a rare disease named CHS i.e. (Congenital Central Hypoventilation Syndrome) is a disorder that affects normal breathing. People with this disorder take shallow breaths (hypoventilate) especially during sleep, resulting in a lack of oxygen and a buildup of carbon dioxide in the blood. The baby was born on 25 Dec 2022, from till then till 28 Aug, 2023, he was treated in Kidney Hospital and Lifeline Medical Institute and now we have brought baby on home ventilation as per recommendation of doctors. Because the expenses in the hospital are very high and we cannot afford it. We have already spent more than 30 lacs on his treatment through savings and loans. Now we need your help, because we are not even able to pay the rent for the ventilation machines at home. Diaphragm pacemaker surgery is only treatment for this we need funds of forty to fifty lacs and we cannot afford it without everyone's help and until the funds are collected for surgery. We will have to keep the child on ventilator support at home which is also not possible for us because of monthly expense of machines, that we are unable to afford as we are already in debt and longer the baby remains on ventilator, the risk to life increases the more. My baby is already on ventilator support since more than 8 months, so we are in a very difficult situation. Please also help us purchase the ventilator machine & other equipments, the total cost of which is Rs 5 lakh. Please help us as much as you can. Youth Helping Trust has helped us a lot & even now they are supporting us so we are very grateful to them.
