Help 15-Year-Old Dhruv Fight for His Life

Dear friends,

My 15-year-old nephew Dhruv is battling a rare and life-threatening condition called **Guillain-Barre Syndrome** (GBS) a disorder where the immune system attacks the nerves, causing rapid paralysis and breathing difficulty.

He is currently in the **ICU at Bombay Hospital**, Indore, fighting for every breath. His treatment involves intensive care and IVIG therapy, and the costs are overwhelming.

We've already spent ₹2, 00,000 through savings and loans. But we urgently need ₹10, 00,000 more for his ongoing treatment.

We are shattered, but we're not giving up - because Dhruv deserves a chance at life.

P Please help us save him.

Any contribution, no matter how small, will mean the world to us. And even if you can't donate, kindly share this message to help us reach more hearts.

With hope and gratitude.

| Bed No:- 462 | |
|--|---|
| Age:- 15 Yrs. Date:- 28-05-2025 Bed No:- 462 | BHID:- |
| Age:- 15 Yrs. | Sex:- Male |
| Name :- Mast. Dhruv Jain | Ref. By :- Dr. Alok Mandliya {MD, DM-Neurology} |

NCV STUDY OF ALL FOUR LIMBS

- prolonged latency, reduced amplitude and normal conduction velocity. CMAP of bilateral median, bilateral tibial & left peroneal nerves show
- CMAP of bilateral facial, bilateral spinal accessory. & right peroneal nerves show normal latency, normal amplitude and normal conduction velocity.
- sural nerves show normal latency, normal amplitude & normal conduction velocity SNAP of bilateral median, bilateral ulnar, bilateral superficial peroneal & bilateral
 - Normal onset latency, normal SNAPs amplitude & normal conduction velocity in Materal median & bilateral Ulmannewes...
 - Bilateral median, Bilateral ulnar, bilateral peroneal F wave were non recordable.
- Bilateral tibial F wave show Normal parameters.
- Bilateral H reflex were non recordable.

Repetitive Nerve Stimulation Test

Normal responses during pre or post exercise in bilateral facial, bilateral spinal accessory & bilateral ulnar nerves.
